PROFESSIONAL SUMMARY

Backend-focused Senior Software Engineer (SDE2) with **4.5+ years** of experience designing, owning, and scaling **distributed systems** and **microservices** in production. Specialized in **Java**, **Spring Boot**, **SQL Query Optimization**, **Redis caching**, and **event-driven architecture**. Proven track record of measurable performance improvements (**25–30% latency/response-time reduction**) and delivering **highly available, scalable backend services**. Strong foundation in **High-Level Design (HLD)**, **Low-Level Design (LLD)**, **System Design**, concurrency, **unit & integration testing**, and high-quality engineering practices.

TECHNICAL SKILLS

Languages: Java, C++, C#

Frameworks & Libraries: Spring Boot, Hibernate, WCF (Windows Communication Foundation)

Databases & Caching: MySQL, PostgreSQL, MS SQL Server, Redis

Messaging & Search: Apache Kafka, RabbitMQ, Apache Solr

Architecture: Microservices, Distributed Systems, REST APIs, Event-Driven Systems, High Availability, Scalability, System Design, High-Level Design (HLD), Low-Level Design (LLD)

Core Backend: Concurrency, Multithreading, Database Indexing, Transaction Management, SQL Query Optimization, OOP, SOLID Principles, Unit Testing, Integration Testing

Cloud & DevOps: AWS (EC2, S3), Docker, Kubernetes, CI/CD, Git, Agile, SDLC

Security: JWT, OAuth2

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Bounteous x Accolite, Gurugram

Oct 2022 – Present

- Owned end-to-end **metadata governance platform** integration; designed internal **metadata** schema aligned with hierarchical model and implemented automated **bidirectional synchronization** using **REST APIs** across **10+ distributed microservices**.
- Architected scalable **metadata management** automation pipeline ensuring data consistency and **high availability** across distributed **backend microservices**, supporting thousands of daily operations.
- Improved API latency by **25%** and response time by **30%** through targeted **SQL Query Optimization**, **Database Indexing**, and **Redis caching** strategies on APIs handling **high-throughput traffic**.
- Designed **Redis caching** layer reducing database load by **40%** and improving read throughput in high-traffic **microservices**.
- Diagnosed and resolved **30-minute** propagation delay after **.NET Remoting** to **WCF (Windows Communication Foundation)** migration by redesigning **asynchronous** service communication using **event-driven** patterns.
- Implemented real-time **message-processing** mechanism between distributed services using **asynchronous queuing**, eliminating delayed backup visibility and improving system reliability.
- Wrote comprehensive **unit tests** and **integration tests**, increasing code coverage and reducing production incidents.
- Mentored **3+ junior engineers** and led peer code reviews enforcing **SOLID Principles**, **System Design (HLD/LLD)** best practices, and production-quality standards.

Software Engineer — Accolite Digital, Gurugram

Jan 2021 – Sep 2022

- Developed high-performance **REST APIs** using **Java**, **Spring Boot**, and **Hibernate** for enterprise-grade **backend** applications serving large-scale production datasets.
- Integrated **Apache Solr** to enable scalable **full-text search** capabilities across large production datasets, reducing search response time significantly.
- Improved codebase maintainability through **modular microservices** design, clean architecture principles, and **unit & integration testing**.

- Collaborated in **Agile** sprints, contributed to **High-Level Design (HLD)** and **Low-Level Design (LLD)** discussions, and delivered features within tight release cycles.

PROJECTS

Event-Driven Notification Service | Java, Spring Boot, Apache Kafka, Docker

- Designed standalone notification **microservice** supporting **asynchronous** email delivery using **event-driven architecture** with **Apache Kafka** as the message broker, enabling decoupled and **scalable** service communication.
- Built extensible template-based rendering engine and **REST API** integration layer enabling dynamic notification triggers across services; containerized using **Docker** for consistent deployments.
- Wrote **unit tests** and **integration tests** achieving high code coverage and ensuring service reliability.

Blog Application | Java, Spring Boot, MS SQL Server, Redis

- Built RESTful **backend** for user registration, post publishing, and commenting; secured with **JWT** and **OAuth2** authentication and session management.
- Implemented **Redis caching** for frequently accessed posts, reducing database calls and improving response time; designed with **scalability** and **high availability** principles in mind.

EDUCATION

B.Tech in Computer Science — Dr. Abdul Kalam Technical University (UPTU), Lucknow

2017 – 2021 | CGPA: 8.4 / 10

ACHIEVEMENTS & CODING PROFILE

- Solved **400+** DSA problems across LeetCode and GeeksforGeeks.
- Certificate of Achievement for exceptional initiative and dedication — awarded by Accolite Digital.
- Recognized for delivering value and enhancing customer experience — awarded by Accolite Digital.
